Question 3 Tries remaining: 3

Marked out of 1.00 | [Flag question](#)

Consider this script.

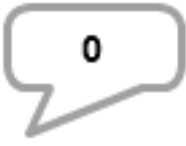

```
when clicked
  set tries to 0
  set password_guess to 0
  repeat until password_guess = abcd
    ask Guess the password and wait
    set password_guess to answer
    change tries by 1
  say tries for 2 secs
```

Which **two** of the following are accurate descriptions?

- ☐ tries is used as a flag variable
- ☐ If the user's first input is 'dcba' and their second input is 'abcd' the following speech bubble results:

- ☐ tries is increased by 1 each time the user makes a guess at the password
- ☐ tries is set to 1 each time the user's input is not 'abcd'
- ☐ tries holds the current user input
- ☐ tries holds the number of times the user inputs 'abcd'
- ☐ If the user's first input is 'abcd' the following speech bubble results:
